Transwarp Data Hub Overview

TDH is a one-stop big data platform covering data lake, data warehouse, real-time streaming and multi-model storage. It provides 10 storage engines and 11 data models, with unified SQL and a unified compute engine.

Typical scenarios:

- Enterprise data lake and lakehouse
- Multi-model analytics across relational, graph, search, time-series data
- Real-time streaming and data warehouse
- Platform-level big data foundation with operations tooling

If the customer only needs an analytical database, ArgoDB is more focused.
If the customer wants a multi-tenant data cloud, evaluate TDC.
